

The Intelligent Data Analysis Group

Dr Allan Tucker

Department of Computer Science, Brunel University London.

IDA
Research

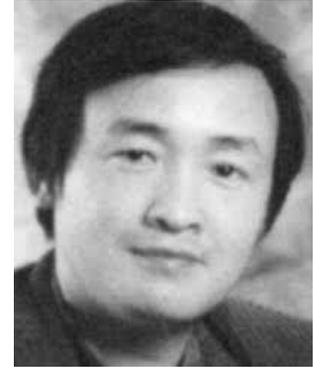

Intelligent Data Analytics at Brunel

- Founded in 1995 at Birkbeck College
- IDA focuses on combination of algorithm / experts and users
- Applications in Environment, Health, Bioinformatics, Software Engineering, Education, Design
- Funded by many sources, nationally and internationally

The Intelligent Data Analysis Group

5 Oct 2016 administrator Edit

The Intelligent Data Analysis (IDA) Group was founded in 1994 under Professor Xiaohui Liu at Birkbeck College, University of London. It moved to Brunel University London in 2000 and hosts around 40 members of academic staff, post doctorate research staff and PhD students. The IDA group is a leading centre of excellence for multidisciplinary work involving artificial intelligence, data science, machine learning, dynamic systems, image and signal processing, optimisation, pattern recognition, statistics and visualisation. The work in the IDA group has led not only to novel research results published in many leading journals in the field, but also to effective implementation of applications that have been successfully used in practical settings, especially in biology and medicine.

News

9th November:
IDA meeting - talks from:
Nicky Nicolson on Biodiversity Informatics
Laura Usitalo on Predicting Fish Abundance with Machine Learning Classifiers

10th October 2016:

Home Program Attending Submission Invited Speakers Information Contact

IDA 2017

London, UK

26 - 28 Oct, 2017

IDA 2017

26-28 October 2017, London, UK

Paper submission deadline:	19 May 2017	Now Closed
Author notification:	14 July 2017	Passed
Camera ready:	14 August 2017	Passed
PhD poster:	8 September 2017	Passed
Symposium:	26-28 October 2017

AI in Health: Disease Progression Modelling

Optimisation & Drug Manufacturing

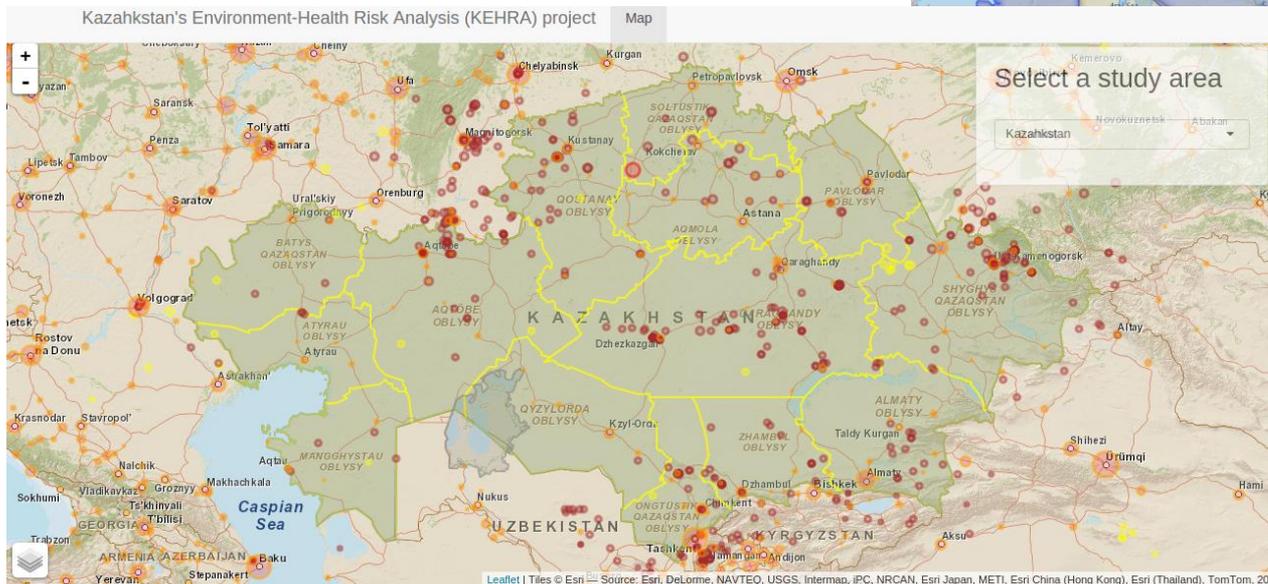

- Feature selection: as multiobjective optimisation
- Application to PLGA synthesis (used for drug manufacturing, it is a component that maintains the function, shape, etc of a pill)
- Transfer learning and meta-learning.

4	= No of oxygen atoms – protein
7	= No of aliphatic bonds – prot.
8	= No of aliphatic rings – prot.
12	= No of asymmetric atoms – prot.
16	= No of chain atoms – prot.
28	= Largest ring size – prot.
35	= Minimal projection radius – prot.
36	= Length perpend. to the min area – prot.
39	= Szeged index – prot.
41	= No of ring atoms – prot.
46	= No of rotatable bonds – prot.
47	= No of atoms – prot.
60	= No of ring atoms – prot.
62	= No of chain atoms – prot.
73	= No of aliphatic rings – prot.
83	= van der Waals vol. – prot.
89	= PVA inner ph. conc.(%) – form. charact.
90	= PVA outer ph. conc.(%) – form. charact.
93	= Encapsulation ratio – form. charact.
94	= Mean particle size – form. charact.
97	= PLGA to plast. ratio – form. charact.
98	= Dissol pH – form. charact.
101	= Prod. method – form. charact.
110	= No of heteroaliphatic rings – plast.
112	= No of ring bonds – plast.
135	= Harary index – plast.
136	= Hyper wiener index – plast.
142	= Plast. index – plast.
143	= Randic index – plast.
148	= Molec. fragment count – plast.
150	= logD at pH 0 – plast.
151	= logD at pH 1 – plast.
152	= logD at pH 2 – plast.
153	= logD at pH 3 – plast.
154	= logD at pH 4 – plast.
155	= logD at pH 5 – plast.
156	= logD at pH 6 – plast.
157	= logD at pH 7 – plast.
158	= logD at pH 8 – plast.
159	= logD at pH 9 – plast.
160	= logD at pH 10 – plast.
161	= logD at pH 11 – plast.
162	= logD at pH 12 – plast.
163	= logD at pH 13 – plast.
164	= logD at pH 14 – plast.
165	= logP – plast.
170	= No of acceptor atoms at pH 0 – plast.
173	= No of acceptor atoms at pH 3 – plast.
184	= No of acceptor atoms at pH 14 – plast.
193	= No of donor atoms at pH 8 – plast.
219	= Princ. comp. of polar. tensor axx – emulsif.
224	= ASA – emulsif.
229	= No of asymmetric atoms – emulsif.
237	= Maximal projection area – emulsif.
246	= Wiener polarity – emulsif.
260	= LogD at pH 10 – emulsif.
269	= No of donor atoms – emulsif.
278	= No of acceptor atoms at pH 8 – emulsif.
281	= No of acceptor atoms at pH 11 – emulsif.
286	= No of donor atoms at pH 1 – emulsif.
289	= No of donor atoms at pH 4 – emulsif.
290	= No of donor atoms at pH 5 – emulsif.
300	= Time (days)

Epidemiology in Kazakhstan

Air pollution + climate change + health outcomes (monthly):

- Sulfur dioxide (SO₂)
- Carbon monoxide (CO)
- Nitrogen dioxide (NO₂)
- Nitrogen oxide (NO)
- Suspended particles
- Ozone (O₃)
- Hydrogen sulfide (H₂S)
- Ammonia (NH₃)

Water (status of surface water quality on hydro-chemical indicators, 2010-2014)

Radioactive contamination (2005-2014)

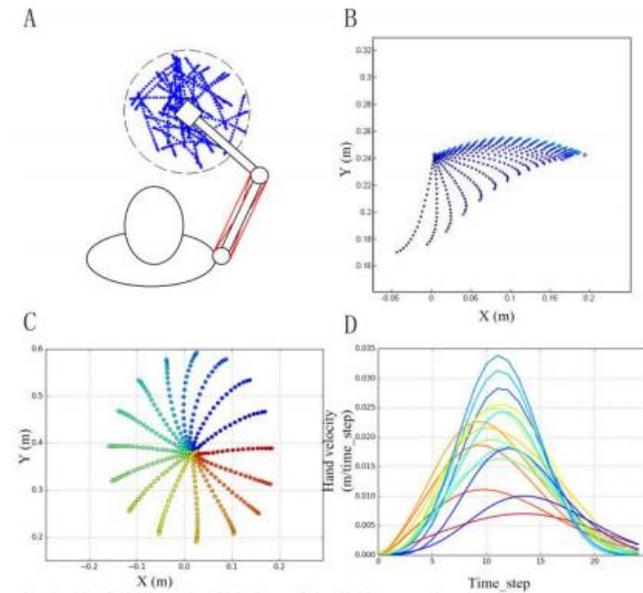

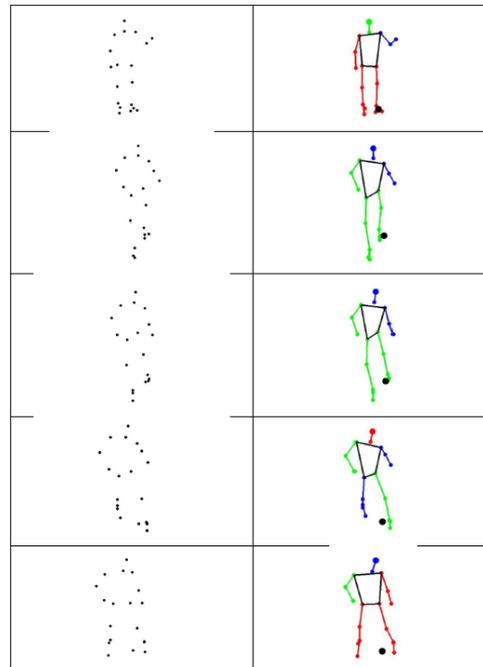

Spatial information
